PROFESSIONAL SUMMARY

Junior full-stack developer and computer engineer with hands-on experience designing, developing, testing, and deploying responsive applications. Built WebPulse, a role-based website-monitoring platform with Viewer, Admin, and Super Admin accounts, subscription upgrades, support for 15+ monitored websites, automated checks every 30 seconds, and Gmail outage and recovery alerts delivered within approximately 5-15 seconds during testing. Proficient in React, TypeScript, JavaScript, Node.js, Express.js, REST APIs, Supabase, SQL, Git, and responsive UI development, with additional experience in Python, OpenCV, Raspberry Pi, and ESP32.

TECHNICAL SKILLS

Frontend: React, TypeScript, JavaScript, Vite, Tailwind CSS, React Router, responsive web design

Backend and APIs: Node.js, Express.js, REST APIs, Supabase, authentication, email notifications

Databases and Deployment: PostgreSQL, MySQL, SQLite, SQL, Vercel, Git, GitHub

Additional Engineering: Python, OpenCV, Raspberry Pi 5, ESP32, Arduino, sensors, GPIO, PWM, servo control

Development Tools: VS Code, Figma, Postman, functional testing, technical documentation

EXPERIENCE

Full-Stack Developer Intern (OJT) - BUKOLABS

2026

Web Application Development / Technology Systems

- Designed, developed, tested, and deployed WebPulse, a role-based website-monitoring platform with Viewer registration, subscription-based Admin and Super Admin upgrades, and support for monitoring 15+ websites.
- Engineered automated availability checks every 30 seconds and Gmail outage and recovery notifications that were consistently delivered within approximately 5-15 seconds during testing.
- Built responsive dashboards for website management, incident history, response data, account administration, and reports; designed the application without fixed limits on users, monitored pages, or monitoring records.

SELECTED PROJECTS

WebPulse - Full-Stack Website Monitoring Platform: React, TypeScript, Supabase, REST APIs, Authentication, Gmail Notifications - Built and deployed a subscription-based platform with Viewer, Admin, and Super Admin roles, support for 15+ websites, 30-second availability checks, and outage or recovery alerts delivered within 5-15 seconds during testing.

LaundriCast - Weather-Based Laundry Planning App: React Native, Expo, Weather API, Supabase - Developed a mobile application that combines live forecasts, laundry recommendations, reminders, and task tracking to support better washing and drying schedules.

TalkGlove - Gesture-to-Speech Assistive Device: Flex Sensors, Embedded Processing, Gesture Classification, Text-to-Speech - Developed a 2026 research prototype that converts recognized hand gestures into text and spoken output for accessible communication.

Smart Sun Tracking Solar Panel: Raspberry Pi 5, Python, LDR Sensors, Servo Control - Built a dual-axis tracking system that adjusts panel position as light direction changes to improve alignment compared with a fixed panel setup.

Electronic Component Detector: Python, OpenCV, Computer Vision, CNN - Developed an image-based tool that identifies and classifies electronic components to support faster component recognition during electronics work.

EDUCATION

Bachelor of Science in Computer Engineering

2022-2026

Bohol Island State University - Main Campus

Relevant coursework: Software Engineering, Data Structures and Algorithms, Computer Networks and Security, Embedded Systems, Microprocessor Systems, Artificial Intelligence
